

Звіт

Лабораторна робота 16. Розробка графічного інтерфейсу користувача

Мета роботи:

Придбання навичок використання засобів клієнтських технологій (Client Technologies) платформи Java SE.

ВИМОГИ

Розробити графічний інтерфейс користувача для програми рішення попередньої лабораторної роботи з використанням засобів JavaFX.

1.1. Розробник: Капелька Ярослав Іванович, КІТ-119а, варіант №9.

2. ОПИС ПРОГРАМИ

2.1. Засоби ООП: клас, метод класу, поле класу.

Ієрархія та структура класів: один публічний клас Main, публічний клас Route, у якого є поля: назва маршруту, загальна кількість місць, дні тижня; номер рейсу, назва станції, час прибуття, час відправлення, кількість вільних місць, статус станції, гетери, сетери, конструктор класу та метод виведення даних класу.

2.2. Важливі фрагменти програми:

Main.java

```
public class Main extends Application {

    private TableView<Route> table = new TableView<Route>();
    private final ObservableList<Route> data = FXCollections.observableArrayList();
    final HBox hb = new HBox();

    public static void main(String[] args) {
        Launch(args);
    }

    @SuppressWarnings({ "unchecked", "rawtypes" })
    @Override
    public void start(Stage stage) {
        Scene scene = new Scene(new Group());
        stage.setTitle("Капелька Ярослав Лабораторная работа №16");
        stage.setWidth(1440);
        stage.setHeight(540);

        final Label label = new Label("Билетная касса");
        label.setFont(new Font("Jackport College NCV", 20));

        table.setEditable(true);

        TableColumn nameCol = new TableColumn("Название маршрута");
        nameCol.setMinWidth(150);
        nameCol.setCellValueFactory(
            new PropertyValueFactory<Route, String>("name_route"));
```

```

TableColumn stationCol = new TableColumn("Название станции");
stationCol.setMinWidth(150);
stationCol.setCellValueFactory(
    new PropertyValueFactory<Route, String>("station_name"));

TableColumn departureCol = new TableColumn("Время отправления с станции");
departureCol.setMinWidth(200);
departureCol.setCellValueFactory(
    new PropertyValueFactory<Route, String>("departure_time"));

TableColumn arrivalCol = new TableColumn("Время прибытия на станцию");
arrivalCol.setMinWidth(200);
arrivalCol.setCellValueFactory(
    new PropertyValueFactory<Route, String>("arrival_time"));

TableColumn numberfreeCol = new TableColumn("Количество пустых мест");
numberfreeCol.setMinWidth(200);
numberfreeCol.setCellValueFactory(
    new PropertyValueFactory<Route, String>("number_of_free_seats"));

TableColumn statusCol = new TableColumn("Статус станции");
statusCol.setMinWidth(100);
statusCol.setCellValueFactory(
    new PropertyValueFactory<Route, String>("status_station"));

TableColumn totalCol = new TableColumn("Общее количество мест");
totalCol.setMinWidth(200);
totalCol.setCellValueFactory(
    new PropertyValueFactory<Route, String>("total_number_of_seats"));

TableColumn daysCol = new TableColumn("День недели");
daysCol.setMinWidth(100);
daysCol.setCellValueFactory(
    new PropertyValueFactory<Route, String>("days"));

TableColumn flightCol = new TableColumn("Номер рейса");
flightCol.setMinWidth(100);
flightCol.setCellValueFactory(
    new PropertyValueFactory<Route, String>("flight_number"));

table.setItems(data);
table.getColumns().addAll(nameCol, stationCol, departureCol, arrivalCol,
numberfreeCol, statusCol, totalCol, daysCol, flightCol);

final TextField addName = new TextField();
addName.setPromptText("Название маршрута");
addName.setMaxWidth(nameCol.getPrefWidth());

final TextField addStation = new TextField();
